

Install Treelets on MacOS 10.15

Install Docker Desktop on MacOS

- Go to <https://docs.docker.com/docker-for-mac/install/> and follow the instruction on how to install Docker Desktop on MacOS.

Setup Treelets from a binary distribution

- Download treelets-docker application for MacOS [MackOs_24_03_2020.zip](#)
- Unzip
- Open the terminal and go inside the treelets-docker catalogue

```
# check docker version commands:  
docker -v  
docker-compose -v
```

Run Docker

- Open the terminal and go inside the treelets-docker catalogue
- Run the following commands in the terminal:

```
# Build  
docker-compose build  
# Running  
docker-compose up -d  
# View instances  
docker-compose ps  
  
# Bring down Docker containers  
docker-compose down
```

Verify your Treelets installation

- Open your favorite web browser and type: <http://localhost:8080>
