

# Install Treelets on Windows 10 Home

## Install Docker Toolbox

- Install the application using the tutorial: [https://docs.docker.com/toolbox/toolbox\\_install\\_windows/](https://docs.docker.com/toolbox/toolbox_install_windows/)

## Setup Treelets from a binary distribution

- Download treelets-docker application for Windows 10 Home [Windows10Home\\_24\\_03\\_2020.zip](#)
- Unzip
- Run Docker Quickstart Terminal from Desktop and go inside treelets-docker catalog

## Run Docker

- # run in Docker Quickstart Terminal command and note ip, it will be used to open application

```
# get default ip for application
docker-machine ip default
```

- # using windows explorer go to the file treelets-docker\app\webapp\assets\config\api.json

```
# change websocketHost address to docker-machine ip default eg.
"websocketHost": "ws://192.168.99.100:4221/notifications"
```

- # run install commands:

```
# create a volume
docker volume create postgres_database

# check volumes
docker volume ls

# Build
docker-compose build
# Running
docker-compose up -d
# View instances
docker-compose ps
```

## Verify your Treelets installation

- On Windows 10 Home use the IP specified during installation: <http://192.168.99.100:8080>
